

Frustrated by growing paper piles?

A Content Management System (CMS) will help to organize all your stored documents, digitally.

Transaction records, customer data, financial documents, employee information, and more can all be stored in a centralized system.

Security: You control what documents each employee has permission to access. This reduces risk and human error.

Compliance: A CMS will help you meet the requirements of your industry by ensuring that your data is organized and retrievable. Plus, you'll rest easy knowing that your data is secure and backed up in case of emergency.

Cost Savings: Digitizing your records will help you recover valuable office space and stop paying for off-site archival storage services.

Case Study:

A large doctor's office struggled with organizing and securing patient medical records.

We developed a customized Content Management System based on an Open Source solution, saving this client over \$10k in licensing costs alone.

Business Automation Experts helps business owners become profitable by automating business processes and ensuring business continuity. Contact us for a Free Business Assessment.
